

# Internship program

Training the  
Murray–Darling Basin's  
future scientific leaders

## About our internship program

For undergraduate, honours and masters students

“

Are you an undergraduate, honours or masters student looking for an exciting industry internship in the water, agriculture or environment sector? Or are you an organisation within the Murray–Darling Basin looking to nurture our future research leaders?

One Basin internships are designed to identify science-based solutions for the One Basin CRC's 85 partners working in the Murray–Darling Basin and to build further opportunities for work on important areas of research and development.

**Our internships are available to students enrolled at our partner universities including:**

University of Sydney

Australian National University

Charles Sturt University

The University of Melbourne

University of Adelaide

Flinders University

## For students

The One Basin CRC is a partnership between 85 organisations operating across the Murray–Darling Basin, including NRM groups, consulting companies, agribusinesses, technology companies, research organisations and government agencies.

Many of our partner organisations can host student interns for different durations and at various times of the year, including during the summer period.

Interns will have the opportunity to participate in CRC workshops, training opportunities, competitions and may be invited to attend the CRC's annual event in August, which is a great opportunity to network with researchers and industry leaders from throughout the basin.

We will let you know of internship opportunities as they arise, and you may be invited by a partner organisation to apply for specific internships.

A limited number of cash scholarships are available.

**To see our list of current internship and work placement opportunities, lodge an expression of interest via [onebasin.com.au](http://onebasin.com.au)**

# For industry partners

Are you interested in hosting a student intern via the One Basin CRC?

Interns are motivated and engaged students who can focus their attention to R&D problems of interest.

Internships are also a great way to attract new talent to your organisation, build collaborative relationships with the CRC's university partners, and to get involved in current research projects.

A variety of arrangements are possible in terms of timeframes, part-time or full-time commitment, level of support provided (eg. accommodation, stipend).
